

03 Looking back on 2021

- 2021 was a great year, not so much for fixed income.
- U.S. equity markets were devoid of volatility, but weaknesses were beginning to show.
- A resurgence of inflation combined with low interest rates created negative real returns in fixed income and cash (a throwback to the 1970s).
- Households are flusher than they've been in years.
- The great resignation is long overdue and speaks to a different job market in the years ahead.
- Omicron and boosters bring us that much closer towards herd immunity.

Important themes as we look ahead

- U.S. equity valuations coming into 2022 were extreme.
- Inflation continues, and where it settles is the trillion(s) dollar question.
- As rates rise, will we see a redo of 2018?

21

- Updated Capital Market Assumptions from Vanguard say it ain't so.
- Buckle up for mid-term elections but look beyond.
- Off in the distance public pension return assumptions remain a concern.

Actionable items for the year(s) ahead

- Balanced portfolios have a long history of performing well throughout market cycles; the average investor doesn't.
- The beauty and importance of compounding dividends.
- Foreign equities continue to be attractive for yield AND appreciation.
- Tax efficiency within investment portfolios remains critical.
- Proper execution of asset location paid off the past two years.
- Municipal bonds instead of excess cash (especially when excess cash is meant to help afford future healthcare), unless cash is meant to help afford Roth conversions or for near-term purchases (1-3 years).
- Donor Advised Funds (DAFs), Qualified Charitable Contributions (QCD's), and Roth conversions.

TABLE OF CONTENTS

LOOKING BACK ON 2021

2021 was another banner year for many areas of the marketplace and balance sheets, although the largest gains were concentrated in a small number of companies, mostly U.S.-based and technology related.

The TINA effect (There Is No Alternative) was in full display as investors chased returns within real estate, private equity, cryptocurrency, NFTs, and traditional equity markets. Stimulative monetary policy from the Fed and Central Banks combined with supportive fiscal policy again fueled speculative price distortions in ways we don't have much history to compare against.

In general, households within all income brackets appear to be in better financial shape than in 2019, and debt payments as a percentage of disposable income are at their lowest level in over 40 years. Wage growth has resumed its upward trend, picking up where it left off at the end of 2019, but a historically tight labor market appears to be accelerating this trend in a way that has some policymakers concerned. Rising labor costs amongst a host of other variables, the least of which is a mountain of global debt, accumulated over the past 14 years in efforts to stave off deflation, has finally led to a resurgence of inflation. Originally viewed as "transitory" by the Fed, components of this inflationary resurgence appear more permanent, leading some to believe the era of easy money—and as a result, easy returns—may be nearing its end.

During the back half of the year, this seemingly impenetrable bull market began showing chinks in its armor. With the prospect of more permanent and higher inflation on the horizon, and therefore, higher interest rates to come, cash and other conservative investments are now generating negative real rates of return to the likes of which we haven't seen since the 1970s. Whether this market has crested or is merely digesting the past 18 months of frenzied appreciation depends on who wins the ongoing tug of war between inflationary and deflationary forces. It's a question trillions of dollars await an answer to.

LOOKING BACK ON 2021

Against this challenging backdrop, we, as your fiduciaries, made several portfolio related changes in 2021:

- We reduced U.S. treasury bonds and more traditional bond strategies in favor of inflation-related strategies like high-yield and multi-sector bond funds to hedge rising rates and the potential permanence of higher inflation.
- We reduced emerging market equities and pure foreign equities in favor of global dividendpaying positions. These global strategies have the latitude to invest wherever they see fit and are not limited by where a company may be domiciled.
- We continue to integrate ESG related positions because of the importance of ESG criteria both for society and from an investment perspective.

Lastly, we encouraged many of you to realize sizable gains within U.S. growth and/or any other overweight positions. As you can probably tell, we believe we're in the latter days of a long and historical bull market, and it's only prudent to realize gains from positions that have performed exceptionally well over the past decade, especially while tax rates remain low.

The quilt chart is always a humbling sight for the near-term forecaster, and a strong reminder as to why diversification is so important.

- 2021 was another banner year for U.S. equities and areas of the marketplace that benefited from the reopening of the economy (e.g., REITS and Commodities).
- From 2020 to 2021, REITs went from last to first, and emerging markets from second to last.
- Fun Fact: From the end of 2019 through the end of 2021, the S&P 500 was up about 30%, but when you extract the FAANG's (Facebook, Apple, Amazon, Netflix, and Google), the index is flat (Jeff Gundlach).

Historically low volatility last year...

 In 2021, the largest correction experienced by the S&P 500 was a marginal 5.2%.
 That's the ninth lowest drawdown in 94 years.

SOURCE: https://awealthofcommonsense.com/2021/12/my-favorite-charts-of-2021/

SOURCE: https://awealthofcommonsense.com/2021/12/my-favorite-charts-of-2021

But weaknesses beneath the surface have started to show.

- Teladoc, DraftKings, Penn National Gaming, Zillow, and Zoom were up 139%, 335%, 238%, 183%, and 396% respectively in 2020. They were all down between 40% and 55% in 2021.
- PayPal, another leader in 2020, was up 111%, but since the end of 2020 is now down 42% (or 57% from its high).

Welcome back Kotter: Real returns on conservative investments are reminiscent of the '70s.

- The resurgence of inflation in the second half of 2021 has pushed real returns in many areas of the fixed income market into negative territory.
- As a result, undisciplined investors are deviating from their advised risk tolerance and parting with bonds in favor of historically expensive equities. A dangerous combo.

Interest rates and inflation

GTM U.S. 33

Nominal and real U.S. 10-year Treasury yields

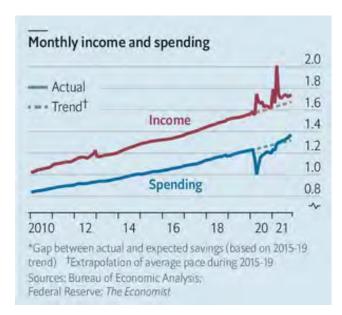

Source; BLS, FactSet, Federal Reserve, J.P. Morgan Asset Management.

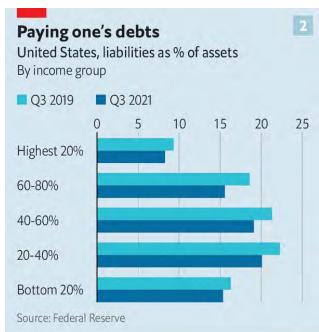

Real 10-year Treasury yields are calculated as the daily Treasury yield less year-over-year core CPI inflation for that month. For the current month, we use the prior month's core CPI figures until the latest data is available.

The Economist

Household debt service ratio

Household net worth

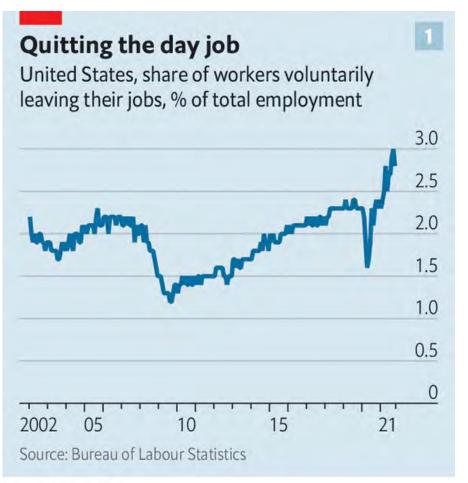

SOURCE: https://am.ipmorgan.com/us/en/asset-management/adv/insights/market-insights/guide-to-the-markets/

Feeling Flush: Despite rising inflation, the consumer is in a better financial position to absorb higher prices.

- · As consumers look beyond Omicron and recalibrate their own cash flows, it's important to recognize the financial health of households.
- Housing prices may be egregious, but debt as a percentage of income is near generational lows.
- Combine this with the recent melt-up in net worth (at least on paper), and consumers are feeling flush in ways we haven't seen in a long time.

2021 was the year of "I quit, and I'm not coming back!"

- For the first time in a long time, employees appear to have leverage over employers.
- The great resignation of 2021 may be a foundational year for a forever different labor market.
- Before the pandemic, 1 out of every 67 job openings were remote; now, it's 1 out of every 7.
- Our new normal will look different than 2019, and with change comes opportunity: new fields, evolving business models, and new investment opportunities.

Some good news on the **COVID** front:

- The rapid spread of the less deadly Omicron variant may have accelerated our push towards immunity.
- The push towards immunity combined with the development of antiviral treatments brings us that much closer to our new normal.

IMPORTANT THEMES AS WE LOOK AHEAD

There are too many parallels between today's markets and speculative eras of the past for us to ignore.

- Eras of dynamic innovation can be very exciting, but that excitement has historically led to the overpricing of companies, reminiscent of the tech bubble of the late '90s.
- The resurgence of inflation has trillions of dollars in search of the ability to foresee the future and where inflation will settle 12-24 months from now.
- Inflation and interest rates are arguably the most important macro factors when it comes to determining fair valuation of stock prices.
- The riskiest end of the U.S. stock market has started to deflate. Many names that benefited from the COVID trade have seen sizeable declines in recent months. This is common as bull markets mature/crest.
- Muted capital market assumptions prevail. Low interest rates coupled with elevated equity valuations equate to a lower return, yet more volatile, world for investors. As a result, it's hard to conjure up a more difficult environment for retirees—especially those who seek to maintain a more conservative balance sheet.
- Mid-term election years are historically volatile, and it's expected this year will be no exception.
- State and local government pension return assumptions still project historically average returns. Taxpayers need to be aware should actual returns fall short.

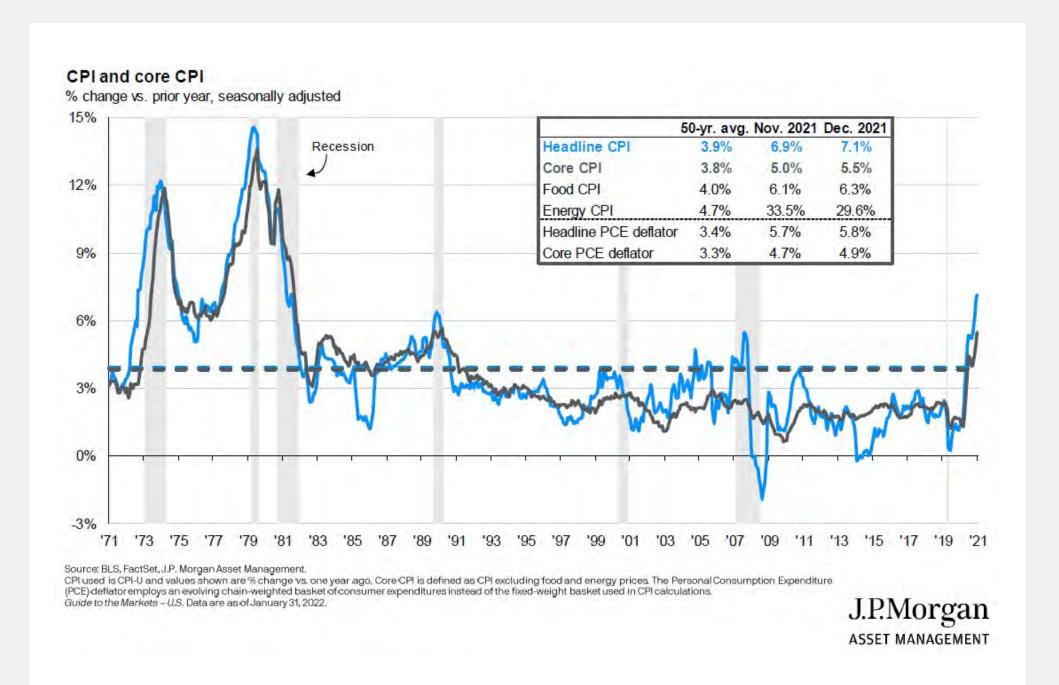

U.S. equity valuations coming into 2022 were extreme.

When we look at the U.S. stock market as a whole, it remains phenomenally expensive according to most valuation metrics.

Where inflation settles is the question trillions of dollars are in search of an answer for.

- Capital Group: High inflation should persist longer than expected.
- Inflation levels should remain elevated through late 2022, fueled by labor shortages and broken supply chains. "Consumer prices will eventually return to normal, but that process may take longer than Fed officials are expecting," says Capital Group fixed income portfolio manager Ritchie Tuazon.

looking statements, actual events, results or performance may differ materially from those reflected or contemplated.

Depending on the number of rate hikes, there is the potential for an inverted yield curve...

- An inverted yield curve is when short-term rates are higher than long-term rates.
- An inverted yield curve has preceded 8 of the past 10 recessions dating back to 1962.
- This last occurred in the spring of 2019 and was one of the reasons we made defensive moves within portfolios going into 2020.
- As of right now, the market doesn't appear to agree with the Fed's rate hike projections, suggesting slower growth than equity valuations reflect.

The prospect of higher interest rates is starting to spook markets.

- Historically, when bull markets roll over, crest, or peak, the first segment of the market to give back gains are the growth/highflyers that helped push markets into expensive territory.
- For investors, this often leads to a rotation away from growth and into value.

SOURCE: https://www.visualcapitalist.com/seeing-red-is-the-heydey-of-pandemic-stocks-over/

Growth/Techy pandemic stocks were hit hard during the first three weeks of 2022.

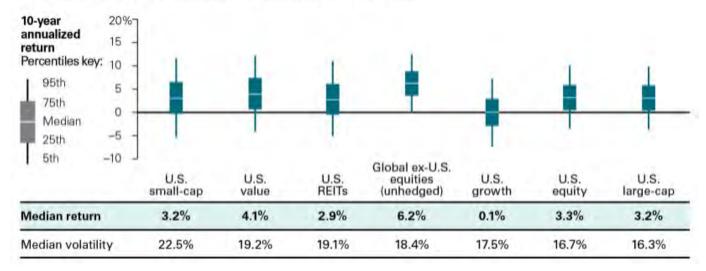

- Last year, we cautioned everyone about the risk of looking in the rearview mirror and how great companies don't always equate to great investments.
- Bull market for innovation, but how much of this innovation is already priced into stock prices?

Historically rich equity valuations with low/rising interest rates equal muted expected returns.

- Foreign equities, both developed and emerging markets, are priced to deliver attractive returns over the coming decade, but with slightly more volatility than their U.S. counterpart.
- We still see relative value within U.S. value, which has lagged U.S. growth for the majority of the past five years.
- Companies with growing dividends are especially attractive due to the benefit of compounding. Dividends have a history of making up the majority of returns during low return decades.
- Within the world of fixed income, low interest rates equal lower returns, and we may be in the early innings of this cycle.

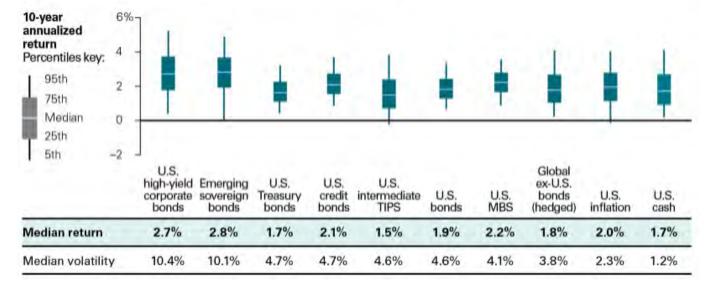

Low expected returns for global equities, but opportunities exist

Equity market 10-year outlook: Setting reasonable expectations

Valuation expansion has chipped away at investors' sources of extra yield

Higher rates have pushed expected fixed income returns higher

NOTES: The forecast corresponds to the distribution of 10,000 VCMM simulations for 10-year annualized nominal returns in USD for asset classes highlighted here. Median volatility is the 50th percentile of an asset class's distribution of annualized standard deviation of returns. Asset class returns do not take into account management fees and expenses, nor do they reflect the effect of taxes. Returns do reflect reinvestment of dividends and capital gains. Indexes are unmanaged; therefore, direct investment is not possible. U.S. inflation is the 10-year average of year-over-year U.S. headline CPI.

SOURCE: Vanguard calculations, as of September 30, 2021.

SOURCE: Capital Group, RIMES, Standard & Poor's. The chart shows the average trajectory of equity returns throughout midterm election years compared to non-midterm election years. Each point on the lines represents the average year-to-date return as of that particular month and day, and is calculated using daily price returns from 1/1/31–11/30/21.

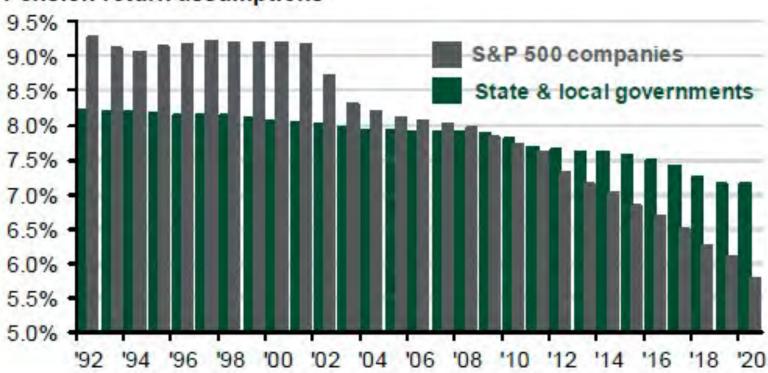

Midterm election years are notorious for uncertainty.

- An analysis of more than 90 years of equity returns reveals that stocks tend to have lower average returns and higher volatility for the first several months of midterm election years.
- Once polls/outcomes become predictable, this trend has a history of reversing.
- Remember, these are averages, and political uncertainty often has a short-term effect. Prudent investors would be wise to look past the noise.

Longer term: Do state and local pensions know something the world doesn't, or are they betting on the taxpayer to bail them out?

- While most of the world appears to have reduced projected returns and repriced expectations to account for low interest rates and historically rich stock valuations, public pensions have resisted doing so.
- The Norwegian sovereign wealth fund (the world's largest) recently warned that investors face years of low returns as the surge in inflation becomes more permanent.
- AQR Capital Management, a well-respected global investment firm, estimates a classic balanced portfolio of 60/40 would return just 2% after inflation over the next 5-10 years, versus the 5% it's enjoyed over the past century.*
- By reducing projected returns, pensions are obligated to make higher contributions. This is often controversial because no one can agree on who foots the bill.

Pension return assumptions

12/31/2021 for Fortune 1000 pension plans. Pension return assumptions based on all available and reported data from S&P 500 Index companies and are as of 12/31/2019. State and local pension return assumptions are weighted by plan size. Pension assets, liabilities and funded status based on Milliman 100 companies reporting pension data as of December 2021. ACTIONABLE ITEMS FOR THE YEAR(S) AHEAD

Maintain balance and discipline.

Source: Bloomberg, FactSet, Standard & Poor's, J.P. Morgan Asset Management; (Bottom) Dalbar Inc, MSCI, NAREIT, Russell.
Indices used are as follows: REITs: NAREIT Equity REIT Index, Small Cap: Russell 2000, EM Equity: MSCI EM, DM Equity: MSCI EAFE, Commodity: Bloomberg Commodity Index, High Yield: Bloomberg Global HY Index, Bonds: Bloomberg U.S. Aggregate Index, Homes: median sale price of existing single-family homes, Cash: Bloomberg '1-3m Treasury, Inflation: CPI, 60/40: A balanced portfolio with 60% invested in S&P 500 Index and 40% invested in high-quality U.S. fixed income, represented by the Bloomberg U.S. Aggregate Index. The portfolio is rebalanced annually. Average asset allocation investor return is based on an analysis by Dalbar Inc., which utilizes the net of aggregate mutual fund sales, redemptions and exchanges each monthas a measure of investor behavior.

Guide to the Markets – U.S. Data are as of December 31, 2021.

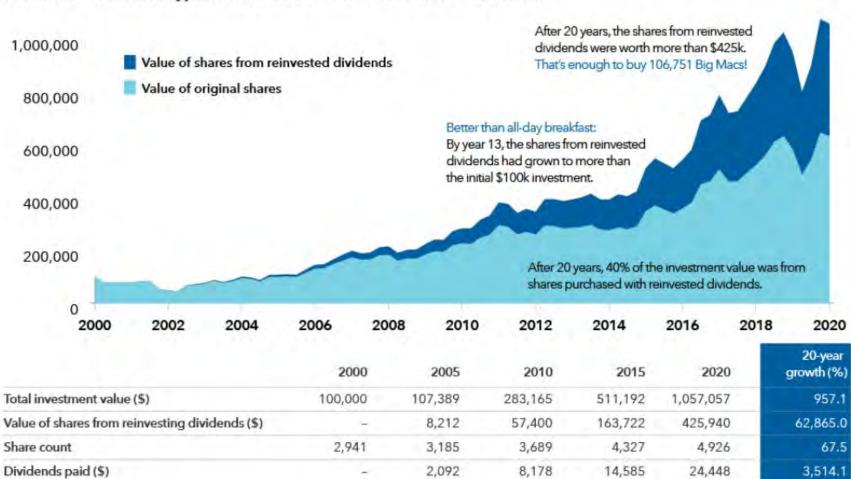

- Maintaining balance and discipline throughout market cycles may sound easy, but it's very hard to do for the average investor.
- While it's easy to understand the importance of balance and discipline, it's often emotionally difficult to sell/trim some of the market's top performers even when it's the prudent course of action.

The power of compounding dividends is often underappreciated and underreported.

- Given current U.S. equity valuations and should we experience a decade of lower returns (or even a lost decade reminiscent of the 2000s), one of the most effective strategies to employ is dividend reinvestment.
- These strategies take time and rarely make for exciting conversation at cocktail parties.
- Overseas markets look especially attractive from this perspective because they yield nearly twice as much income as U.S. equities.

Reinvested dividends: Better than breakfast all day

\$1,200,000 Growth of hypothetical \$100k investment in McDonald's stock

Sources: Capital Group, FactSet. Growth rate calculations for value of shares from reinvested dividends and dividends paid use the first year's dividends payment (\$676) as a starting value. This information should not be considered a recommendation to purchase or sell a particular security and is provided for illustrative purposes only.

SOURCE: www.capitalgroup.com/advisor/insights/articles/dividend-growth-special-sauce-long-term-investing.html

Foreign equities and overseas bonds will be needed for income/yield.

- For pre-retirees and savers, foreign markets show relative value as compared to the richly priced developed markets.
- This, combined with the potential for compounding dividends, could be a very attractive strategy for long-term investors.

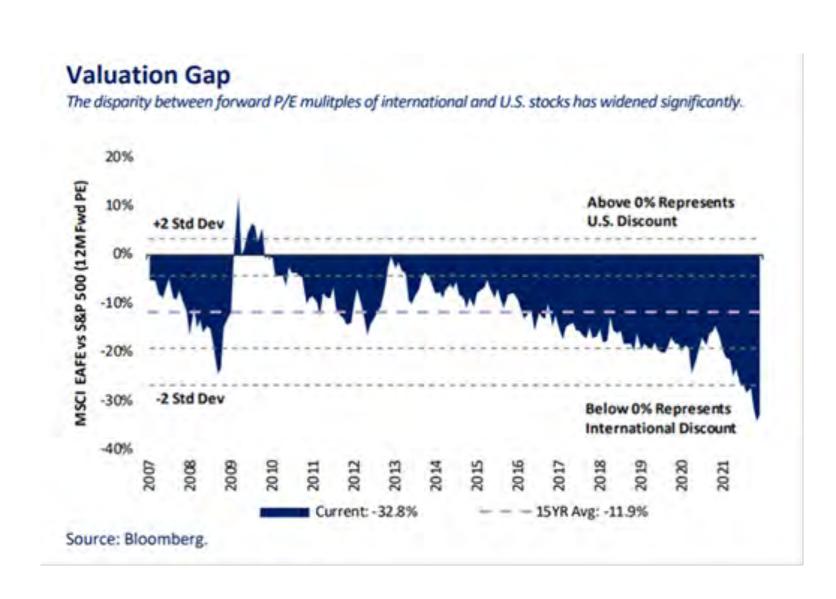

Source: FactSet, Standard & Poor's, J.P. Morgan Asset Management; (Top) Ibbotson; (Bottom) BAML, Bloomberg, Federal Reserve, FTSE, J.P. Morgan, MSCI, NCREIF, Russell. Guide to the Markets - U.S. Data are as of December 31, 2021.

J.P.Morgan

Foreign equities may be a relative bargain.

 It would be easy to dismiss the relative value of foreign equities given how U.S. equities have outperformed for the past 14 years, but that would be a mistake for multiple reasons.

SOURCE: www.oppenheimer.com/news-media/2022/insights/fed-pivot-inflation-to-color-2022-markets-print.aspx

	Tax treatment of expected returns	Taxable	Tax- deferred	Tax- exempt
Tax-free municipal securities and municipal mutual funds	Exempt	1	1	4
Equity securities held long-term for growth		1	1	1
Equity index funds/ETFs (other than REITs)	Taxed at long-term capital gain rates	1	1	1
Tax-managed mutual funds and managed accounts		1	1	1
Real estate investment trusts (REITs)	Generally, 80% of income taxed at ordinary rates; 20% tax-exempt	1	1	1
High-turnover stock mutual funds that deliver effectively all returns as short-term capital gains	Taxed at ordinary	1	1	1
Fully taxable bonds and bond funds (i.e., corporates)	income rates	4	1	1

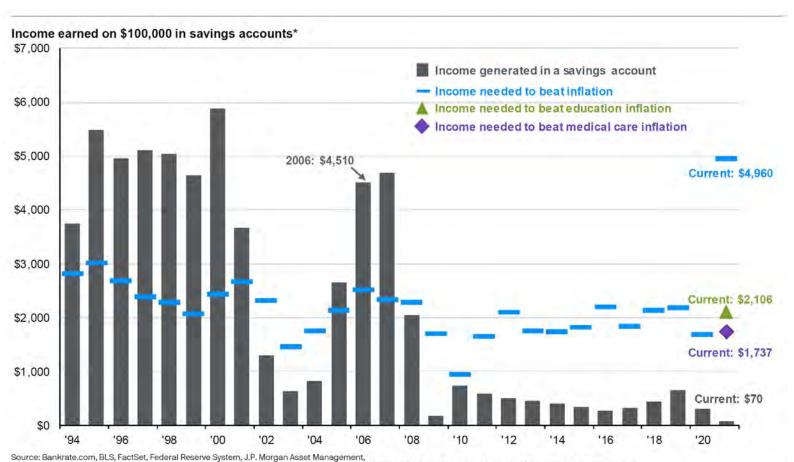

SOURCE: www.fidelity.com/viewpoints/investing-ideas/asset-location-lower-taxes

Asset location.

- In pursuit of higher net returns and greater yield, proper execution of asset location will be increasingly important as returns moderate and should tax rates rise.
- 2020 and 2021 provided a textbook example of how material savings can be realized by means of volatile markets.
- If you create proper tax flexibility by funding pre-tax, Roth and post-tax accounts you can locate specific investments within the most appropriate type of account in a way you can financially benefit, by reducing taxes in the future.
- By locating the most aggressive growthoriented strategies within taxable accounts, we realized losses through swaps in March and April 2020, and carried forward those realized losses to help offset realized gains in 2021.
- For example, \$200k of realized losses in 2020 offset \$200k of realized gains in 2021 that would have otherwise been subject to 23.8% in taxes. That equates to tax savings of \$47,600.

What to do with excess cash.

- Cash balances are an important component of a healthy and strong balance sheet and in our opinion emergency funds should always be held in cash.
- Excess cash intended for future
 investment opportunities or cash meant
 to fund longer-term goals (e.g., healthcare
 costs) should be invested in a way that's
 more likely to keep pace with the rising
 cost of those goals.
- Municipal bonds may be a conservative solution for those who wish to remain conservative, but also have a fighting chance of keeping up with inflation.

BENEFITS OF CONVERTING TO ROTH

A Roth conversion is taking the pre-tax dollars in your retirement account - whether that be a qualified plan sponsored by your employer or a traditional IRA and paying tax on these amounts currently while leaving such funds in a tax free account (i.e., a Roth account).

The earnings after the conversion grow tax-free indefinitely.

There is no income limit applicable to individuals to do a Roth conversion.

You will avoid your lifetime RMDs if in a Roth IRA.

No limit to the amount of money that can be converted.

How a Donor-Advised Fund Works is invested and You make an irrevocable contribution of personal assets You make grants to qualified charities You immediately Donor-Advised receive the maximu **Fund Account** at any time tax deduction You name your account and all of its advisors, successors and charitable beneficiaries

Traditional IRA Using a QCD Withdrawal Withdraw money Instruct your

Tax efficiency and charitable planning.

- We spend more time these days communicating with tax counsel and estate attorneys than ever before.
- Roth conversions continue to be a very attractive tax saving and/or estate planning strategy for many pre-retirees, early retirees, and even some older retirees.
- Donor Advised Funds are an ideal solution. for those charitably inclined that have lowcost basis stock positions and/or more stock exposure within their portfolio than intended.
- Qualified Charitable Distributions provide a tax-efficient way of reducing taxable income while fulfilling philanthropic goals.

very generation faces unique and unprecedented circumstances and today's set of headwinds and opportunities are no exception. No matter the conditions, we feel prepared for what lies ahead, and you should too. None of the themes we've outlined are a surprise. We're thrilled with the culture, expertise, and caliber of the professionals we associate with, and how our independent collective advocacy will help us remain in front of your evolving goals and lifestyles. We look forward to the obstacles and opportunities of 2022 and beyond.

This material does not provide individually tailored investment advice. It has been prepared without regard to the individual financial circumstances and objectives of persons who receive it. The strategies and/or investments discussed in this material may not be appropriate for all investors. Steward Partners recommends that investors independently evaluate particular investments and strategies, and encourages investors to seek the advice of a Wealth Manager. The appropriateness of a particular investment or strategy will depend on an investor's individual circumstances and objectives.

The Sedoric Group is a Wealth Manager with Steward Partners participating in the Steward Discretionary Asset Management program. The Discretionary Asset Management program is an investment advisory program in which the client's Wealth Manager invests the client's assets on a discretionary basis in a range of securities. The Asset Management program is described in the applicable Steward Partners ADV Part 2, available at https://adviserinfo.sec.gov/Firm/283004 or from your Wealth Manager.

Equity securities may fluctuate in response to news on companies, industries, market conditions and general economic environment. Companies paying dividends can reduce or stop payouts at any time.

Interest on municipal bonds is generally exempt from federal income tax. However, some bonds may be subject to the alternative minimum tax (AMT). Typically, state tax-exemption applies if securities are issued within one's state of residence and, local tax-exemption typically applies if securities are issued within one's city of residence. The tax exempt status of municipal securities may be changed by legislative process, which could affect their value and marketability.

Bonds are affected by a number of risks, including fluctuations in interest rates, credit risk and prepayment risk. In general, as prevailing interest rates rise, fixed income securities prices will fall. Bonds face credit risk if a decline in an issuer's credit rating, or creditworthiness, causes a bond's price to decline. Finally, bonds can be subject to prepayment risk. When interest rates fall, an issuer may choose to borrow money at a lower interest rate, while paying off its previously issued bonds. As a consequence, underlying bonds will lose the interest payments from the investment and will be forced to reinvest in a market where prevailing interest rates are lower than when the initial investment was made.

The returns on a portfolio consisting primarily of Environmental, Social and Governance ("ESG") aware/Socially Responsible Investing ("SRI")/Sustainable investments may be lower or higher than a portfolio that is more diversified or where decisions are based solely on investment considerations. Because ESG/SRI/Sustainable investments criteria exclude some investments, investors may not be able to take advantage of the same opportunities or market trends as investors that do not use such criteria.

Exchange traded funds and mutual funds are sold by prospectus. Investors should carefully consider the investment objectives arid risks as well as charges and expenses of mutual funds and exchange traded funds including the underlying portfolios before investing. To obtain a prospectus, contact your Wealth Manager. The prospectus contains this and other information about the investment. Read the prospectus carefully before investing.
